ART PROJECT *FAWN 2.0 JA*
WAVES FOOD PROJECT

We are FAWN 2.0 JA and this year we are going to give ourselves another challenge: by creating a company of object planning, modeling, prototyping and design, which may find its roots in the cultural identity of the operating context. Our enterprise aims at

producing innovative design solutions for exhibition of objects made by firms working in the “wine and food field”.

We have started business relationships with “*Pisti*” firm. After a meeting with the business expert and various discussions and planning, a new idea was born: “*Waves Food*”, our exhibitor for wine and food products. In order to obtain the structure we have used a technique applied in the shipyards of Sant’Agata di Militello, (in the province of Messina), the moulding of laminated timber.

We have carried out a study of the above said specific technique during the school-job alternation project, aimed at applying the handcrafted nautical techniques to contemporary design. In the shipyard, in fact, they use this technique to build vessel parts.

In this way, we have obtained a solid structure with a fascinating and elegant appearance.

The “*Waves Food*” product is an exhibitor realized in marine plywood. The system used to make it is a lamellar structure that, through the assembling of thin wood layers, allowed getting peculiar and innovative shapes. The “*Waves Food*” name derives from an element that Sicilian people have in their heart: the sea.

Two main parts form the name: *Waves*, from sea waves, and *Food*, the field on which we put our attention.

“*Waves Food*” is a synthesis between image, matter and use.

Project and Video realized by the students of Art and Design State High School, of IIS LS Piccolo of Capo d’ Orlando, with the supervision of Art and Design teacher Cappotto Mauro.
